**UNDER THE**

**FACULTY OF SCIENCE**

**SYLLABUS**

**(FOR THE STUDENTS ADMITTED FROM THE ACADEMIC YEAR 2014 – 15 ONWARDS)**

**BOARD OF STUDIES IN STATISTICS (PG)**

**IRINJALAKUDA, THRISSUR - PIN**

**680 125 KERALA, 673 635, INDIA**

**JULY, 2014**

***M.Sc. (Statistics) Degree Programme under the Credit Semester System(CSS) for the Affiliated Colleges of University of Calicut***

***(Under the Regulation for the Credit Semester System (PG) for Affiliated Colleges-2010; Ref: U.O. No.GAIV/J1/1373/08 dated 23.07.2010 & 27.11.2010)***

**Programme Structure & Syllabi  
(With effect from the academic year 2013-2014 onwards)**

Duration of programme: **Two years** - divided into **four semesters** of not less than **90** working days each.

<u>Course Code</u>	<u>Type</u>	<u>Course Title</u>	<u>Credits</u>
<b><u>I SEMESTER</u></b> (Total Credits: 20)			
ST1C01	Core	Measure Theory and Integration	4
ST1C02	Core	Analytical Tools for Statistics – I	4
ST1C03	Core	Analytical Tools for Statistics – II	4
ST1C04	Core	Regression and linear programming	4
ST1C05	Core	Distribution Theory	4
<b><u>II SEMESTER</u></b> (Total Credits: 18)			
ST2C06	Core	Estimation Theory	4
ST2C07	Core	Sampling Theory	4
ST2C08	Core	Probability Theory	4
ST2C09	Core	Design and Analysis of Experiments	4
ST2C10	Core	Statistical Computing– I (Practical course)	2
<b><u>III SEMESTER</u></b> (Total Credits: 16)			
ST3C11	Core	Stochastic Processes	4
ST3C12	Core	Testing of Statistical Hypotheses	4
ST3E--	Elective	Elective-I	4
ST3E--	Elective	Elective-II	4
<b><u>IV SEMESTER</u></b> (Total Credits: 18)			
ST4C13	Core	Multivariate Analysis	4
ST4E--	Elective	Elective-III	4
ST4C14	Core	Project/Dissertation and External Viva-Voce	8
ST4C15	Core	Statistical Computing– II (Practical course)	2

**Total Credits: 72** (Core courses-52, Elective courses-12 and Project / Dissertation-8)

The courses Elective –I, Elective –II, and Elective –III shall be chosen from the following list.

### LIST OF ELECTIVES

<u>Sl. No.</u>	<u>Course Title</u>	<u>Credits</u>
E01	Advanced Operations Research	4
E02	Econometric Models	4
E03	Statistical Quality Control	4
E04	Reliability Modeling	4
E05	Advanced Probability	4
E06	Time Series Analysis	4
E07	Biostatistics	4
E08	Computer Oriented Statistical Methods	4
E09	Lifetime Data Analysis	4
E10	Statistical Decision Theory and Bayesian Analysis	4
E11	Statistical Ecology and Demography	4
E12	Longitudinal Data Analysis	4
E13	Abstract Algebra	4
E14	Generalized Linear Models	4
E15	Official Statistics	4

### QUESTION PAPER PATTERN:

For each course there shall be an external examination of duration **3 hours**. The valuation shall be done by Direct Grading System. Each question paper will consists of three parts- **Part-A** consisting of **twelve short answer questions**, each of **weightage 1**, in which **all questions** are to be answered; **Part-B** with **twelve paragraph answer type questions** each of **weightage 2**, in which **any eight questions** are to be answered and **Part-C** consisting of **four essay type questions** each of **weightage 4** in which **any two questions** are to be answered. The questions are to be evenly distributed over the entire syllabus within each part.

-----

## MODEL QUESTION PAPER

I/II/III/IV SEMESTER M.Sc. DEGREE EXAMINATION (CSS), Month & Year

Branch: Statistics

Course Code: Course Name

Time :3hrs

MaximumWeightage:36

### Part A

(Answer **all** the questions. Weightage **1** for each question)

1. ...
2. ...
3. ...
4. ...
5. ...
6. ...
7. ...
8. ...
9. ...
10. ...
11. ...
12. ...

### Part B

(Answer **any eight** questions. Weightage **2** for each question)

13. ...
14. ...
15. ...
16. ...
17. ...
18. ...
19. ...
20. ...
21. ...
22. ...
23. ...
24. ...

### Part C

(Answer **any two** questions. Weightage **4** for each question)

25. ...
26. ...
27. ...
28. ...

**SYLLABI OF COURSES OFFERED IN SEMESTER -I**

---

**ST1C01: MEASURE THEORY AND INTEGRATION (4 CREDITS)**

**Unit I.** Reimann-Stieltjes integral and uniform convergence

Definitions,existence and properties of Reimann-Stieltjes integral, integration by parts, change of variable, mean value theorems, fundamental theorem of calculus. Sequence and series of functions, point wise and uniform convergence, consequence of uniform convergence on continuity differentiability and integrability, Weistrass's theorem.

**Unit II.** Measure spaces, Measurable functions

$\sigma$ -algebra of subsets of sets, measure spaces, measurable functions and their combinations, simple functions, non-negative measurable functions as limit of simple functions, integral of a simple function, integral of a non negative measurable function. The monotone convergence theorem, Fatou's Lemma.

**Unit III.** Integrable functions and modes of convergence.

Integrable real valued functions, Lebesgue dominated convergence theorem, integral which depend on a parameter, normed linear spaces,  $L_p$  spaces, Holder's inequality, Minkowski's inequality, modes of convergence.

**Unit IV.** Decomposition of measures, extension of measures and product spaces.

The Hahn Decomposition theorem, The Jordan decomposition, Radan-Nikodym theorem and Lebsgue decomposition theorem. Measures on an algebra of sets, Caratheodory extension theorem, Lebesgue and Lebesgue-Stieltjes measure, rectangles, sections, monotone class lemma, Tonill's and Fubini's theorem.

Text books

1. **Rudin. W.** Principles of real analysis, Mcgraw-hill(1976)
2. **Robert G Bartil**, Elements of integration, John Wiley & sons, New York

Reference books

1. **T.M Apostole**, Mathematical analysis, Nerosa(1985).
2. **Royden.H.L**, Real analysis(third edition), McMillain publishing company, New York.

.....

## ST1C02: ANALYTICAL TOOLS FOR STATISTICS – I (4 CREDITS)

### Unit-1 .Multidimensional Calculus

Limit and continuity of a multivariable function, derivatives of a multivariable function, Taylor's theorem for a multivariable function. Inverse and implicit function theorem, Optima of a multivariable function, Method of Lagrangian multipliers, Riemann integral of a multivariable function.

### Unit-2. Analytical functions and complex integration

Analytical function, harmonic function, necessary condition for a function to be analytic, sufficient condition for function to be analytic, polar form of Cauchy- Riemann equation, construction of analytical function. Complex line integral, Cauchy's theorem, Cauchy's integral formula and its generalized form. Poisson integral formula, Morera's theorem. Cauchy's inequality, Liouville's theorem, Taylor's theorem, Laurent's theorem.

### Unit-3. Singularities and Calculus of Residues.

Zeroes of a function, singular point, different types of singularities. residue at a pole, residue at infinity, Cauchy's residue theorem, Jordan's lemma, integration around a unit circle, poles lie on the real axis, integration involving many valued function.

### Unit- 4. Laplace transform and Fourier Transform

Laplace transform, Inverse Laplace transform. Applications to differential equations, The infinite Fourier transform, Fourier integral theorem. Different forms of Fourier integral formula, Fourier series.

#### Book for study

1. **Andre's I. Khuri**(1993) Advanced Calculus with applications in statistics. Wiley & sons (Chapter 7)
2. **Pandey, H.D, Goyal, J. K & Gupta K.P** (2003) Complex variables and integral transforms Pragathi Prakashan, Meerut.
3. **Churchill Ruel.V.** (1975), Complex variables and applications .McGraw Hill.

2. **Malik, S.C & Arora.S** (2006): Mathematical analysis, second edition, New age international

.....

## ST1C03: ANALYTICAL TOOLS FOR STATISTICS – II (4 CREDITS)

### Unit I. Basics of linear algebra

Definition of a vector space, sub spaces, linear dependence and independence, basis and dimensions, direct sum and compliment of a subspace, caution spaces, inner product and orthogonality.

### Unit- 2. Algebra of Matrices

Linear transformations and matrices, operations on matrices, properties of matrix operations, Matrices with special structures – triangular matrix, idempotent matrix, Nilpotent matrix, symmetric Hermitian and skew Hermitian matrices unitary matrix. Row and column space of a matrix, inverse of a matrix. Rank of product of matrix, rank factorization of a matrix, Rank of a sum and projections, Inverse of a partitioned matrix, Rank of real and complex matrix, Elementary operations and reduced forms.

### Unit- 3 Eigen values, spectral representation and singular value decomposition

Characteristic roots, Cayley-Hamilton theorem, minimal polynomial, eigen values and eigen spaces, spectral representation of a semi simple matrix, algebraic and geometric multiplicities, Jordan canonical form, spectral representation of a real symmetric, Hermitian and normal matrices, singular value decomposition.

### Unit -4 Linear equations generalized inverses and quadratic forms

Homogenous system, general system, Rank Nullity Theorem, generalized inverses, properties of g-inverse, Moore-Penrose inverse, properties, computation of g-inverse, definition of quadratic forms, classification of quadratic forms, rank and signature, positive definite and non negative definite matrices, extreme of quadratic forms, simultaneous diagonalisation of matrices.

### Text Books

1. **Ramachandra Rao and Bhimashankaran** (1992).Linear Algebra Tata McGraw hill
2. **Lewis D.W** (1995) Matrix theory, Allied publishers, Bangalore.
3. **Walter Rudin** (1976).Principles of Mathematical Analysis, third edition, McGraw –hill international book company New Delhi.

### References

2. **Rao C.R** (2002) Linear statistical inference and its applications, Second edition, John Wiley and Sons, New York.
3. **Graybill F.A** (1983) Matrices with applications in statistics.

.....

## ST1C04 : REGRESSION AND LINEAR PROGRAMMING (4 CREDITS)

### Unit I. Linear models

Gauss Markov linear model-estimability of parametres, Gauss markov theorem, Properties of least square estimators, estimation of  $\sigma^2$ , inference on regression parameters, Residual analysis, model checking, model selection. Polynomial regression models, orthogonal polynomials.

### Unit II.Generalised regression models

Logistic regression model, Poisson regression model, generalized linear model, link function and linear predictors. Parametric estimation and inference on GLM, prediction and estimation in GLM, residual analysis in GLM over dispersion.

### Unit III. Algebra of linear programming problems

Introduction to linear programming problem(LPP) graphical solution, feasible, basic feasible, and optimum basic feasible solution to an LPP. Analytical results in general LPP, theoretical development of simplex method, artificial variables, Big-M method, two phase simplex method, unbounded solution, LPP with unrestricted variable, degeneracy and cycling, revised simplex method.

### Unit IV. Duality, transportation problem and game theory

Duality theory, dual simplex method sensitivity analysis, parametric programming. Transportation problem, assignment problem, travelling salesman problem. Game theory, pure and mixed strategies, conversion of two person zero gain to a linear programming problem, fundamental theorem of gain. Solution to game through algebraic, graphical and linear programming method

### Text books

1. Ramachandra Rao and Bhima Shankaren(1992), Linear algebra, Tata McGraw Hill
2. Seber G.A.F(1971), Linear regression analysis, Wiley, New York
3. Joshi D.D, Linear estimation, (1983), Linear estimation and design of experiment. Wiley Eastern, New Delhi

### References

1. Draper, N R and H Smith(1988), Applied regression analysis, Third edition, Wiley New York.
2. Chatterjee S and Price B(1977) regression analysis by examples, Wiley New York
3. Bovas Abraham and Johannes Ledolter(2006), introduction to regression modeling, Thompson and Brooks USA

## ST1C05: DISTRIBUTION THEORY (4 CREDITS)

### Unit- 1. Discrete distributions

Random variables ,Moments and Moment generating functions, Probability generating functions, Discrete uniform, binomial, Poisson, geometric, negative binomial, hyper geometric and Multinomial distributions, power series distributions.

### Unit- 2. Continuous distributions

Uniform , Normal, Exponential, Weibull, Pareto, Beta, Gama, Laplace, Cauchy and Log-normal distribution. Pearsonian system of distributions, location and scale families.

### Unit-3. Functions of random variables.

Joint and marginal distributions, conditional distributions and independence, Bivariate transformations, covariance and correlations, bivariate normal distributions, hierarchical models and mixture distributions, multivariate distributions, inequalities and identities. Order statistics.

### Unit -4 .Sampling distributions

Basic concept of random sampling, Sampling from normal distributions, properties of sample mean and variance. Chi-square distribution and its applications, t-distribution and its applications. F-distributions- properties and applications. Noncentral Chi-square, t, and F-distributions.

### Text Books

1. **Rohatgi, V.K.**(1976).Introduction to probability theory and mathematical statistics. John Wiley and sons.
2. **George Casella and Roger L. Berger**(2003). Statistical Inference. Wodsworth & brooks Pafefic Grove, California.

.....

---

**SYLLABI OF COURSES OFFERED IN SEMESTER-II**

---

**ST2C06: ESTIMATION THEORY (4 CREDITS)**

**Unit-1:** Sufficient statistics and minimum variance unbiased estimators.

Sufficient statistics, Factorization theorem for sufficiency (proof for discrete distributions only), joint sufficient statistics, exponential family, minimal sufficient statistics, criteria to find the minimal sufficient statistics, Ancillary statistics, complete statistics, Basu's theorem (proof for discrete distributions only), Unbiasedness, Best Linear Unbiased Estimator (BLUE), Minimum Variance Unbiased Estimator (MVUE), Fisher Information, Cramer Rao inequality and its applications, Rao-Blackwell Theorem, Lehmann- Scheffe theorem, necessary and sufficient condition for MVUE.

**Unit-2:** Consistent Estimators and Consistent Asymptotically Normal Estimators.

Consistent estimator, Invariance property of consistent estimators, Method of moments and percentiles to determine consistent estimators, Choosing between consistent estimators, Consistent Asymptotically Normal (CAN) Estimators.

**Unit-3:** Methods of Estimation.

Method of moments, Method of percentiles, Method of maximum likelihood (MLE), MLE in exponential family, One parameter Cramer family, Cramer-Huzurbazar theorem, Bayesian method of estimation.

**Unit-4:** Interval Estimation.

Definition, Shortest Expected length confidence interval, large sample confidence intervals, Unbiased confidence intervals, Bayesian and Fiducial intervals.

**Text Books**

1. **Kale, B.K.** (2005). A first course in parametric inference, Second Edition, Narosa Publishing House, New Delhi.
2. **George Casella and Roger L Berger** (2002). Statistical inference, Second Edition, Duxbury, Australia.

**References**

  3. **Rohatgi, V.K** (1984). Statistical Inference, John Wiley and sons, New York.
  4. **Rao, C.R** (2002). Linear Statistical Inference and its applications, Second Edition, John Wiley and sons, New York.
- .....

**ST2C07: SAMPLING THEORY (4 CREDITS)**

**Unit-I:** Census and Sampling-Basic concepts, probability sampling and non probability sampling, simple random sampling with and without replacement- estimation of population mean and total-estimation of sample size- estimation of proportions. Systematic sampling-linear and circular systematic sampling-estimation of mean and its variance- estimation of mean in populations with linear and periodic trends.

**Unit-II:** Stratification and stratified random sampling. Optimum allocations, comparisons of variance under various allocations. Auxiliary variable techniques. Ratio method of estimation-estimation of ratio, mean and total. Bias and relative bias of ratio estimator. Mean square error of ratio estimator. Unbiased ratio type estimator. Regression methods of estimation. Comparison of ratio and regression estimators with simple mean per unit method. Ratio and regression method of estimation in stratified population.

**Unit-III:** Varying probability sampling-pps sampling with and without replacements. Des-Raj ordered estimators, Murthy's unordered estimator, Horwitz-Thompson estimators, Yates and Grundy forms of variance and its estimators, Zen-Midzuno scheme of sampling,  $\pi$ PS sampling.

**Unit-IV:** Cluster sampling with equal and unequal clusters. Estimation of mean and variance, relative efficiency, optimum cluster size, varying probability cluster sampling. Multi stage and multiphase sampling. Non-sampling errors.

**Text Books / References**

1. **Cochran W.G** (1992): Sampling Techniques, Wiley Eastern, New York.
2. **D. Singh and F.S. Chowdhary** ( ): Theory and Analysis of Sample Survey Designs, Wiley Eastern (New Age International), NewDelhi.
3. **P.V.Sukhatme et.al.** (1984): Sampling Theory of Surveys with Applications. IOWA State University Press, USA.

.....

## ST2C08: PROBABILITY THEORY (4 CREDITS)

**Unit I.** Probability space, distribution function, independence.

Axiomatic approach to probability, distribution functions, independence of events and random variables, Borel 0-1 Law, Kolmogorove 0-1 law.

**Unit II.** Convergence of random variables and law of large numbers.

Convergence in probability, almost sure convergence, convergence in distribution, convergence in  $r^{\text{th}}$  mean, weak law of large numbers, strong law of large numbers.

**Unit III.** Characteristic function and central limit theorem

Definition of a characteristic function, elementary properties, characteristic functions and moments, moment problem. Inversion theorem, Helly-Bray theorem and continuity theorem, central limit theorem of Lindberg Levi, Liapouov and Lindberg-Feller theorem.(Proof of Lindberg-feller theorem not required)

**Unit IV.** Conditional expectations and martingale.

Definition and properties of conditional expectations, Radan-Nikodym theorem, Martingale, super and sub martingale, Dood decomposition, stopping times, Martingale limits theorems.

Text book

2. **Galambos** (1988), Advanced probability theory, Marcel Dekar, New York

.....

**ST2C09: DESIGN AND ANALYSIS OF EXPERIMENTS (4 CREDITS)**

**Unit- 1:** Linear Model, Estimable Functions and Best Estimate, Normal Equations, Sum of Squares, Distribution of Sum of Squares, Estimate and Error Sum of Squares, Test of Linear Hypothesis, Basic Principles and Planning of Experiments, Experiments with Single Factor-ANOVA, Analysis of Fixed Effects Model, Model Adequacy Checking, Choice of Sample Size, ANOVA Regression Approach, Non parametric method in analysis of variance, Kruskal-Wallis Test.

**Unit- 2:** Complete Block Designs, Completely Randomized Design, Randomized Block Design, Latin Square Design, Greco Latin Square Design, Analysis with Missing Values, ANCOVA,

**Unit- 3:** Incomplete Block Designs-BIBD, Recovering of Intra Block Information in BIBD, Construction of BIBD, PBIBD, Youden Square, Lattice Design.

**Unit- 4:** Factorial Designs-Basic Definitions and Principles, Two Factor Factorial Design-General Factorial Design,  $2^k$  Factorial Design-Confounding and Partial Confounding,  $3^2$ -factorial, Asymmetric factorial, Two Level Fractional Factorial, Split Plot Design.

**Text Books**

## ST2C10: STATISTICAL COMPUTING-I(2 CREDITS) (PRACTICAL COURSE)

**Teaching scheme: 6 hours practical per week.**

Statistical Computing-I is a practical course. Its objectives are to develop scientific and experimental skills of the students and to correlate the theoretical principles with application based studies. The practical is based on the following FIVE courses of the first and second semesters.

1. ST1C04: Regression and Linear Programming
2. ST1C05: Distribution Theory
3. ST2C06: Estimation Theory
4. ST2C07: Sampling Theory
5. ST2C09: Design and Analysis of Experiments

Practical is to be done using R programming / R software. At least five statistical data oriented/supported problems should be done from each course. Practical Record shall be maintained by each student and the same shall be submitted for verification at the time of external examination. Students are expected to acquire working knowledge of the statistical package – EXCEL.

The Board of Examiners (BoE) shall decide the pattern of question paper and the duration of the external examination. The external examination at each centre shall be conducted and evaluated on the same day jointly by two examiners – one external and one internal, appointed at the centre of the examination by the University on the recommendation of the Chairman, BoE. The question paper for the external examination at the centre will be set by the external examiner in consultation with the Chairman, BoE and the H/Ds of the centre. The questions are to be evenly distributed over the entire syllabus. Evaluation shall be done by assessing each candidate on the scientific and experimental skills, the efficiency of the algorithm/program implemented, the presentation and interpretation of the results. The valuation shall be done by the direct grading system and grades will be finalized on the same day.

.....

**SYLLABI OF COURSES OFFERED IN SEMESTER-III**

---

**ST3C11: STOCHASTIC PROCESSES (4 CREDITS)**

- Unit-I.** Concept of Stochastic processes, examples, Specifications; Markov chains- Chapman Kolmogorov equations – classification of states – limiting probabilities; **Gamblers ruin problem and Random Walk** – Mean time spent in transient states – **Branching processes** (discrete time), **Hidden Markov chains**.
- Unit-II.** **Exponential distribution – counting process – inter arrival time and waiting time distributions. Properties of Poisson processes – Conditional distribution of arrival times. Generalization of Poisson processes – non-homogenous Poisson process, compound Poisson process, conditional mixed Poisson process. Continuous time Markov Chains – Birth and death processes – transition probability function-limiting probabilities.**
- Unit-III.** **Renewal processes-limit theorems and their applications. Renewal reward process. Regenerative processes, semi-Markov process. The inspection paradox, Insurers ruin problem.**
- Unit-IV.** **Basic characteristics of queues – Markovian models – network of queues. The M/G/I system. The G/M/I model, Multi server queues. Brownian motion Process – hitting time – Maximum variable – variations on Brownian motion – Pricing stock options – Gaussian processes – stationary and weakly stationary processes.**

**Text Books**

1. **Ross, S.M.** (2007): Introduction to Probability Models. Ixth Edition, Academic Press.
2. **Medhi, J.** (1996): Stochastic Processes. Second Editions. Wiley Eastern, New-Delhi.

**References**

## ST3C12: TESTING OF STATISTICAL HYPOTHESES (4 CREDITS)

**Unit-I.** Tests of hypotheses & Most Powerful Tests: Simple versus simple hypothesis testing problem

–Error probabilities, p-value and choice of level of significance – Most powerful tests – Neyman Pearson Lemma – Generalized Neyman–Pearson Lemma, One-sided UMP tests, two- sided UMP tests and UMP unbiased tests.

**Unit-II.** UMP test for multi-parameter case: UMP unbiased test,  $\alpha$ -similar tests and  $\alpha$ -similar tests with Neyman structure, construction of  $\alpha$ -similar tests with Neyman structure. Principle of invariance in testing of hypotheses, locally most powerful tests – Likelihood ratio tests – Bayesian tests .

**Unit-III.** Non-parametric Tests: Single sample tests – testing goodness of fit, Chi-square tests- Kolmogorov– Smirnov test – sign test – Wilcoxon signed rank test. Two sample tests – the chi-square test for homogeneity – Kolmogorov – Smirnov test; the median test – Mann- Whitney-Wilcoxon test - Test for independence – Kendall’s tau – Spearman’s rank correlation coefficient – robustness.

**Unit-IV.** Sequential Tests: Some fundamental ideas of sequential sampling – Sequential Probability Ratio Test (SPRT) – important properties, termination of SPRT – the fundamental identity of SPRT – Operating Characteristic (OC) function and Average Sample Number (ASN) of SPRT – Developing SPRT for different problems .

### **SYLLABI OF COURSES OFFERED IN SEMESTER-IV**

---

#### **ST4C13: MULTIVARIATE ANALYSIS (4 CREDITS)**

**Unit-I.** Multivariate Normal Distribution – Definition and properties, conditional distribution, marginal distribution. Independence of a linear form and quadratic form, independence of two quadratic forms, distribution of quadratic form of a multivariate vector. Partial and multiple correlation coefficients, partial regression coefficients, Partial regression coefficient.

**Unit-II.** Estimation of mean vector and covariance vector – Maximum likelihood estimation of the mean vector and dispersion matrix. The distribution of sample mean vector, inference concerning the mean vector when the dispersion matrix is known for single and two populations. Distribution of simple, partial and multiple (null-case only) correlation coefficients; canonical correlation. Wishart distribution – properties – generalized variance.

**Unit-III.** Testing Problems – Mahalanobis  $D^2$  and Hotelling's  $T^2$  Statistics, Likelihood ratio tests – Testing the equality of mean vector, equality of dispersion matrices, testing the independence of sub vectors, sphericity test.

**Unit-IV.** The problem of classification – classification of one of two multivariate normal population when the parameters are known and unknown. Extension of this to several multivariate normal populations. Population principal components – Summarizing sample variation by principal components – Iterative procedure to calculate sample principal components; Factor analysis.

**ST4E--:** ..... (Elective-III) **(4 Credits)**

(to be selected from the approved list of Electives)

.....  
**ST4C14: PROJECT/DISSERTATION AND EXTERNAL VIVA-VOCE(8 CREDITS)**

**( 5 CREDITS FOR PROJECT/DISSERTATION AND 3 CREDITS FOR EXTERNAL VIVA-VOCE)**

In partial fulfillment of the M.Sc. programme, during the fourth semester each student has to undertake a project work in a selected area of interest under a supervisor in the department. The topic could be a theoretical work or data analysis type. At the end of the fourth semester the student shall prepare a **report/dissertation** which summarizes the project work and submit to the H/D of the parent department positively before the deadline suggested in the Academic calendar. The project/ dissertation is of **5 credits** for which the following evaluation will be followed:

The valuation shall be jointly done by the supervisor of the project in the department and an External Expert appointed by the University, based on a well defined scheme of valuation framed by them, under direct grading system. The following break up of weightage is suggested for its valuation.

- 1 Review of literature, formulation of the problem and defining clearly the objective: 20%
- 2 Methodology and description of the techniques used: 20%
- 3 Analysis, programming/simulation and discussion of results: 20%
- 4 Presentation of the report, organization, linguistic style, reference etc.: 20%
- 5 Viva-voce examination based on project/dissertation: 20%.

The External Viva-Voce shall be conducted a Board of Examiners, consisting of at least two external experts, appointed by the University. The external viva-voce shall cover all the courses undergone in the two-year programme and carries **3 credits**. The evaluation shall be done by the direct grading system.

.....

## ST4C15: STATISTICAL COMPUTING-II(2 CREDITS) (PRACTICAL COURSE)

**Teaching scheme: 6 hours practical per week.**

Statistical Computing-II is a practical course. Its objectives are to develop scientific and experimental skills of the students and to correlate the theoretical principles with application based studies. The practical is based on the core courses of the third and fourth semesters, viz..

1. **ST3C12: Testing of Statistical Hypotheses**
2. **ST4C13: Multivariate Analysis**

Practical is to be done using R programming / R software. At least five statistical data oriented/supported problems should be done from each course. Practical Record shall be maintained by each student and the same shall be submitted for verification at the time of external examination. Students are expected to acquire working knowledge of the statistical package- EXCEL.

The Board of Examiners (BoE) shall decide the pattern of question paper and the duration of the external examination. The external examination at each centre shall be conducted and evaluated on the same day jointly by two examiners – one external and one internal, appointed at the centre of the examination by the University on the recommendation of the Chairman, BoE. The question paper for the external examination at the centre will be set by the external examiner in consultation with the Chairman, BoE and the H/Ds of the centre. The questions are to be evenly distributed over the entire syllabus. Evaluation shall be done by assessing each candidate on the scientific and experimental skills, the efficiency of the algorithm/program implemented, the presentation and interpretation of the results. The valuation shall be done by the direct grading system and grades will be finalized on the same day.

.....

The courses Elective –I, Elective –II, and Elective –III shall be chosen from the following list.

### LIST OF ELECTIVES

<b><u>Sl. No.</u></b>	<b><u>Course Title</u></b>	<b><u>Credits</u></b>
E01	Advanced Operations Research	4
E02	Econometric Models	4
E03	Statistical Quality Control	4
E04	Reliability Modeling	4
E05	Advanced Probability	4
E06	Time Series Analysis	4
E07	Biostatistics	4
E08	Computer Oriented Statistical Methods	4
E09	Lifetime Data Analysis	4
E10	Statistical Decision Theory and Bayesian Analysis	4
E11	Statistical Ecology and Demography	4
E12	Longitudinal Data Analysis	4
E13	Abstract Algebra	4
E14	Generalized Linear Models	4
E15	Official Statistics	4

-----

---

## SYLLABI OF ELECTIVE COURSES

---

### E01: ADVANCED OPERATIONS RESEARCH (4 CREDITS)

- Unit-I.** Non-linear programming, Lagrangian function, saddle point, Kuhn-Tucker Theorem, Kuhn-Tucker conditions, Quadratic programming, Wolfe's algorithm for solving quadratic programming problem.
- Unit-II.** Dynamic and Geometric programming: A minimum path problem, single additive constraint, additively separable return; single multiplicative constraint, additively separable return; single additive constraint, multiplicatively separable return, computational economy in DP. Concept and examples of Geometric programming.
- Unit-III.** Project management: CPM and PERT; probability of project completion; PERT-crashing. Inventory management; Deterministic models, the classical economic order quantity, nonzero lead time, the EOQ with shortages allowed, the production lot-size model. Probabilistic models. the newspaper boy problem, a lot size. reorder point model.
- Unit-IV.** Replacement models; capital equipment that deteriorates with time, Items that fail completely, mortality theorem, staffing problems, block and age replacement policies. Simulation modeling: Monte Carlo simulation, sampling from probability distributions. Inverse method, convolution method, acceptance-rejection methods, generation of random numbers, Mechanics of discrete simulation.

4. **Kambo, N.S.** (1984): Mathematical programming, East West Press, New Delhi.

.....

**E02: ECONOMETRIC MODELS****(4 CREDITS)**

- Unit-I.** Basic economic concepts: Demand, revenue, average revenue, marginal revenue, elasticity of demand, cost function, average cost, marginal cost. Equilibrium analysis: Partial market equilibrium- linear and nonlinear model, general market equilibrium, equilibrium in national income analysis. Leontief input output models. Optimization problems in economics, Optimization problems with more than one choice variable: multi product firm, price discrimination.
- Unit-II.** Optimization problems with equality constraints: utility maximization and consumer demand, homogeneous functions, Cobb-Duglas production function, least cost combination of inputs, elasticity of substitution, CES production function. Dynamic analysis: Domar growth model, Solow growth model, Cobweb model.
- Unit-III.** Meaning and methodology of econometrics, regression function, multiple regression model, assumptions, OLS and ML estimation, hypothesis testing, confidence interval and prediction. Multicollinearity, Heteroscedasticity, Autocorrelation: their nature, consequences, detection, remedial measures and estimation in the presence of them. Dynamic econometric models: Auto regressive and distributed lag- models, estimation of distributed lag- models, Koyck approach to distributed lag- models, adaptive expectation model, stock adjustment or partial adjustment model, estimation of auto regressive models, method of instrumental variables, detecting autocorrelation in auto regressive models: Durbin- h test, polynomial distributed lag model.
- Unit-IV.** Simultaneous equation models: examples, inconsistency of OLS estimators, identification problem, rules for identification, method of indirect least squares, method of two stage least squares .  
Time series econometrics: Some basic concepts, stochastic processes, unit root stochastic processes, trend stationary and difference stationary stochastic processes, integrated stochastic processes, tests of stationarity, unit root test, transforming non-stationary time series, cointegration. Approaches to economic forecasting, AR, MA, ARMA and ARIMA modeling of time series data, the Box- Jenkins methodology.

**Text Books**

1. **Alpha C Chiang** (1984): *Fundamental Methods of Mathematical Economics*(Third edition), McGraw –Hill, New York.
2. **Damodar N Gujarati** (2007): *Basic Econometrics* (Fourth Edition), McGraw-Hill, New York.

3. **Maddala,G.S.** (2001):*Introduction to Econometrics* (Third edition), John Wiley & Sons, New York.
4. **Taro Yamane** (1968): *Mathematics for Economists an elementary survey* (second edition), Prentice-Hall, India.

.....

### E03: STATISTICAL QUALITY CONTROL (4 CREDITS)

- Unit-I.** Quality and quality assurance, methods of quality assurance, Introduction to TQM. Acceptance sampling for attributes, Single sampling, Double sampling. Multiple sampling and Sequential sampling plans. Measuring the performance of these sampling plans
- Unit-II.** Acceptance sampling by variables, sampling plans for single specification limit with known and unknown and unknown variance, Sampling plans with double specification limits., comparison of sampling plans by variables and attributes, Continuous sampling plans I, II &III.
- Unit-III.** Control charts, Basic ideas, Designing of control charts for the number of non-conformities. Mean charts. Median charts. Extreme value charts, R-charts, and S-charts ARI, Economic design of control charts.
- Unit-IV.** Basic concepts of process monitoring and control; process capability and process optimization. Control charts with memory – CUSUM charts, EWMA mean charts, OC and ARI for control charts, Statistical process control, Modeling and quality programming. Orthogonal arrays and robust quality.

.....

**E04: RELIABILITY MODELING****(4 CREDITS)**

- Unit-I.** Reliability concepts and measures; components and systems; coherent systems; reliability of coherent systems; cuts and paths; modular decomposition; bounds on system reliability; structural and reliability importance of components.
- Unit-II.** Life distributions; reliability function; hazard rate; common life distributions-exponential, Weibull, Gamma etc. Estimation of parameters and tests in these models. Notions of ageing; IFR, IFRA, NBU, DMRL, and NBUE Classes and their duals; closures or these classes under formation of coherent systems, convolutions and mixtures.
- Unit-III.** Univariate shock models and life distributions arising out of them; bivariate shock models; common bivariate exponential distributions and their properties. Reliability estimation based on failure times in variously censored life tests and in tests with replacement of failed items; stress-strength reliability and its estimation.
- Unit-IV.** Maintenance and replacement policies; availability of repairable systems; modeling of a repairable system by a non-homogeneous Poisson process. Reliability growth models; probability plotting techniques; Hollander-Proschan and Deshpande tests for exponentiality; tests for HPP vs. NHPP with repairable systems. Basic ideas of accelerated life testing.

- .....

**E05: ADVANCED PROBABILITY****(4 CREDITS)**

- Unit-I.** Review of Elementary Probability theory, Basic properties of expectations, Sequences of Integrals, Lebesgue–Stieltjes integrals, Convergence Concepts, Weak convergence – Theorems.
- Unit-II.** Complete convergence: Kolmogorov’s three-series and two series theorems, Decomposition of Normal distribution, Levy’s metric, Zolotarev and Lindeberg – Feller Theorems; Berry – Esseen Theorem.
- Unit-III.** Infinite Divisibility of Probability Distributions: Infinitely Divisible Distribution on (i) The Non-Negative Integers.(ii) The Non-Negative Reals. Triangular arrays of independent random variables - Convergence under UAN, Convergence to special distributions, Stable distributions.
- Unit-IV.** Conditional expectations (general case) – definition and properties, Random-Nikodyn theorem, Martingales, super/sub-martingales, Doob’s decomposition, stopping times, Martingale limit theorems, Introduction to Martingales in continuous time, path properties and examples; Exchangeability, DeFenneti’s theorem.

**Text Books**

1. **Galambos J** (1988): Advanced Probability Theory, Marcel Dekker, New York
2. **Resnick, S.I.** (1999): A Probability Path, Birkhäuser, Boston.
3. **Steutel, F.W. and van Harn, K.** (2004). Infinite Divisibility of Probability Distributions on the Real Line. Marcel Dekker Inc., New York.

**References**

5. **Brieman, L.**(1968): Probability, Addison-Wesley.

.....

**E06: TIME SERIES ANALYSIS****(4 CREDITS)**

- Unit-I.** Motivation, Time series as a discrete parameter stochastic process, Auto – Covariance, Auto-Correlation and spectral density and their properties. Exploratory time series analysis, Test for trend and seasonality, Exponential and moving average smoothing, Holt – Winter smoothing, forecasting based on smoothing, Adaptive smoothing.
- Unit-II.** Detailed study of the stationary process: Autoregressive, Moving Average, Autoregressive Moving Average and Autoregressive Integrated Moving Average Models. Choice of AR / MA periods.
- Unit-III.** Estimation of ARMA models: Yule – Walker estimation for AR Processes, Maximum likelihood and least squares estimation for ARMA Processes, Discussion (without proof) of estimation of mean, Auto-covariance and auto-correlation function under large samples theory, Residual analysis and diagnostic checking. Forecasting using ARIMA models, Use of computer packages like SPSS.
- Unit-IV.** Spectral analysis of weakly stationary process. Herglotzic Theorem. Periodogram and correlogram analysis. Introduction to non-linear time Series: ARCH and GARCH models.

**Text Books**

1. **Box G.E.P and Jenkins G.M.** (1970). Time Series Analysis, Forecasting and Control. Holden-Day
2. **Brockwell P.J. and Davis R.A.** (1987). Time Series: Theory and Methods, Springer – Verlag.
3. **Abraham B and Ledolter J.C.** (1983). Statistical Methods for Forecasting, Wiley

**References**

  2. **Fuller W.A.** (1978). Introduction to Statistical Time Series, John Wiley.
  3. **Kendall M.G.** (1978), Time Series, Charles Griffin
  4. **K.Tanaka** (1996). Time Series Analysis – Wiley Series.
- .....

**E07: BIOSTATISTICS****(4 CREDITS)**

- Unit-I.** Biostatistics-Example on statistical problems in Biomedical Research-Types of Biological data- Principles of Biostatistical design of medical studies- Functions of survival time, survival distributions and their applications viz. exponential, gamma, Weibull, Rayleigh, lognormal, distribution having bath-tub shape hazard function. Parametric methods for comparing two survival distributions ( L.R test and Cox's F-test).
- Unit-II.** Type I, Type II and progressive or random censoring with biological examples, Estimation of mean survival time and variance of the estimator for type I and type II censored data with numerical examples. Non-parametric methods for estimating survival function and variance of the estimator viz. Acturial and Kaplan –Meier methods.
- Unit-III.** Categorical data analysis (logistic regression) - Competing risk theory, Indices for measurement of probability of death under competing risks and their inter-relations. Estimation of probabilities of death under competing risks by ML method.  
Stochastic epidemic models: Simple and general epidemic models.
- Unit-IV.** Basic biological concepts in genetics, Mendel's law, Hardy- Weinberg equilibrium, random mating, natural selection, mutation, genetic drift, detection and estimation of linkage in heredity.  
Planning and design of clinical trials, Phase I, II, and III trials. Sample size determination in fixed sample designs. Planning of sequential, randomized clinical trials, designs for comparative trials; randomization techniques and associated distribution theory and permutation tests (basic ideas only); ethics behind randomized studies involving human subjects; randomized dose-response studies(concept only).

### **E08: COMPUTER ORIENTED STATISTICAL METHODS (4 CREDITS)**

**Note:-** *The objective of the course is to enhance the programming skills and working knowledge of available numerical and statistical softwares. The primary need is to abreast them with the latest developments in the computing world thereby enabling them to perform data analysis effectively and efficiently in any specialized statistical software.*

**Unit-I.** Introduction to the statistical software R, Data objects in R, Creating vectors, Creating matrices, Manipulating data, Accessing elements of a vector or matrix, Lists, Addition, Multiplication, Subtraction, Transpose, Inverse of matrices. Read a file. Boolean operators.

**Unit-II.** R-Graphics- Histogram, Box-plot, Stem and leaf plot, Scatter plot, Matplot, Plot options; Multiple plots in a single graphic window, Adjusting graphical parameters. Looping- For loop, repeat loop, while loop, if command, if else command.

**Unit-III.** Bootstrap methods: re-sampling paradigms, bias and standard errors, Bootstrapping for estimation of sampling distribution, confidence intervals, variance stabilizing transformation, bootstrapping in regression and sampling from finite populations. Jackknife and cross- validation: jackknife in sample surveys, jack-knifing in regression with hetero-sedasticity cross-validation for tuning parameters.

**Unit-IV.** EM algorithm: applications to missing and incomplete data problems, mixture models. Applications to Bayesian analysis, Smoothing with kernels: density estimation, simple nonparametric regression.

### E09: LIFETIME DATA ANALYSIS

(4 CREDITS)

**Unit-I.** Lifetime distributions-continuous and discrete models-important parametric models: Exponential Weibull, Log-normal, Log-logistic, Gamma, Inverse Gaussian distributions, Log location scale models and mixture models. Censoring and statistical methods.

**Unit-II.** The product-limit estimator and its properties. The Nelson-Aalen estimator, interval estimation of survival probabilities, asymptotic properties of estimators, descriptive and diagnostic plots, estimation of hazard function, methods for truncated and interval censored data, Life tables.

**Unit-III.** Inference under exponential model – large sample theory, type-2 censored test plans, comparison of two distributions; inference procedures for Gamma distribution; models with threshold parameters, inference for log-location scale distribution: likelihood based methods: Exact methods under type-2 censoring; application to Weibull and extreme value distributions, comparison of distributions.

**Unit-IV.** Log-location scale (Accelerated Failure time) model, Proportional hazard models, Methods for continuous multiplicative hazard models, Semi-parametric maximum likelihood-estimation of continuous observations, Incomplete data; Rank test for comparing Distributions, Log-rank test, Generalized Wilcoxon test. A brief discussion on multivariate lifetime models and data.

5. **Lee, Elisa, T.** (1992): Statistical Methods for Survival Data Analysis, John Wiley & Sons.

.....

**E10: STATISTICAL DECISION THEORY AND BAYESIAN ANALYSIS (4 CREDITS)**

**Unit-I.** Statistical decision Problem – Decision rule and loss-randomized decision rule. Decision Principle – sufficient statistic and convexity. Utility and loss-loss functions-standard loss functions-vector valued loss functions.

**Unit-II.** Prior information-subjective determination of prior density-Non-informative priors-maximum entropy priors, the marginal distribution to determine the prior-the ML-II approach to prior selection. Conjugate priors.

**Unit-III.** The posterior distribution-Bayesian inference-Bayesian decision theory-empirical Bayes analysis – Hierarchical Bayes analysis-Bayesian robustness Admissibility of Bayes rules.

**Unit-IV.** Game theory – basic concepts – general techniques for solving games Games with finite state of nature-the supporting and separating hyper plane theorems. The minimax theorem. Statistical games.

**Text Book**

1. **Berger, O.J.**(1985). Statistical decision Theory and Bayesian Analysis, Second Edition Springer-Verlag.

**References**

3. **Giovanni Parmigiani, Luroles, Y.T. Inouve and Hedibert F. Lopes** (2009): Decision Theory- Principles and Approaches, John Wiley.

.....

## E11: STATISTICAL ECOLOGY AND DEMOGRAPHY (4 CREDITS)

**Unit-I.** Population Dynamics: One species - exponential, logistic and Gompertz models. Two species - competition, coexistence, predator - prey oscillation, Lotka – Volterra equations, isoclines. Leslie matrix model for age structured populations. Survivorship curves - constant hazard rate, monotone hazard rate and bath-tub shaped hazard rates. Population density estimation: Capture- recapture models, nearest neighbor models, line transect sampling.

**Unit-II.** Ecological Diversity: Simpson's index, Shannon – Weaver index, Diversity as average rarity.

Optimal Harvesting of Natural Resources, Maximum sustainable yield, tragedy of the commons. Game theory in ecology: Concept of Evolutionarily stable strategy, its properties, simple cases such as Hawk-Dove game. Foraging Theory: Diet choice problem, patch choice problem, mean variance trade-off.

**Unit-III.** Demography: Sources of Demographic data: Census, Vital Registration System, Sample surveys. Population Composition and Structure- Age, Sex, Religion, Education, Income, Dependency, Population pyramid. Concepts of Fertility, Nuptiality, Mortality, Morbidity, Migration and Urbanization. Determinants and consequences of population change. Measurement of mortality and morbidity, Force of mortality. Measurement of fertility- TFR, GRR, NRR.-Life tables, uses in Demography Multiple decrement and multi-state life tables.

**Unit-IV.** Structure of population- Lotka's stable population theory, Stationery and quasi-stable population, population momentum, population waves. Population growth-exponential, logistic- population estimation and projection- Mathematical and component methods. Stochastic models for population changes- birth and death process- migration models- model life tables- U.N., Coale & Demeny, Leaderman's system, Brass' Logit system, U.N. tables for developing countries- Stable population models.

.....

**E12: LONGITUDINAL DATA ANALYSIS (4 CREDITS)**

**Unit-I:**

General Linear Model for Longitudinal Data. ML and REML estimation, EM algorithm  
 hm: General linear mixed-effects model, Inference for ; the random effects, BLUPs, Empirical Bayes  
 , Bayes, Shrinkage Model building and diagnostic, Relaxing parametric assumptions: generalized additive mixed model.

**Unit-2.**

Generalized Linear Model for Longitudinal Data: Marginal models, for binary, ordinal, and count data: Random effects models for binary ordinal and count data: Transition models: Likelihood-based models for categorical data; GEE; Models for mixed discrete and continuous responses.

**Unit-3.**

Dropouts and missing data: Classification missing data mechanism; Intermittent missing Values and dropouts; Weighted estimating equations; Modeling the dropout process (Selection and pattern mixture models).

**Unit-4.** Time-dependent covariates and special topics: Dangers of time-dependent covariates: Lagged covariates; Marginal Structural models; Joint models for longitudinal and survival data; Multivariate longitudinal data; Design of randomized and observational longitudinal studies.

.....

**E13: ABSTRACT ALGEBRA**

**(4 CREDITS)**

Text book : A First course in Abstract Algebra,Seventh Edition,

Author : John B. Fraleigh

**Module -1(Sections 4,5,6,8,9,10,11 . Omit the sections 6.3,6.4,6.5,6.8,6.9)**

Groups,Subgroups, Cyclic groups, Groups of permutation(Upto Cayley’s Theorem)-

Orbits, Cycles and the alternating groups(omit all proofs)-

Cosets and theorem of Lagrange-

Direct products and finitely generated abelian groups( omit all proofs).

**Module 2(Sections 13,14,15,34,36,37)**

Homomorphism-

Factor groups, factor group computation and simple groups (omit all proofs)-

Isomorphism theorems, Sylow theorems (omit all proofs)-

Applications of Sylow theorems

**Module 3(Sections 18,19,22,23)**

Rings and fields, Integral domains (omit all proofs)-

Rings of polynomials, factorization of polynomials over a field(omit proofs of 22.2, 22.4)

**Module 4(Sections 26,27,29,31,33 omit the proofs of all theorems)**

Homomorphisms and factor rings, prime and maximal ideals, introduction to extension fields, algebraic extensions, finite fields.

**E14: GENERALIZED LINEAR MODELS****(4 CREDITS)****Unit-1:**

Exponential family of distributions and properties (Normal, Binomial and Poisson)  
 Review of models for normal response models Tables, measures of association and odds ratios.  
 Generalized linear models- Three part specification, examples.

**Unit-II:**

Logistic and Poisson regression: logit model for dichotomous data with single and multiple explanatory variables, ML estimation, large sample tests about parameters, goodness of fit, analysis of deviance, variable selection, introduction to Poisson regression, MLE for Poisson regression, Applications in Poisson regressions, Lack of fit in Logistic regression.

**Unit-III:**

Log linear models for contingency tables: interpretation of parameters, ML estimation of parameters, likelihood ratio tests for various hypotheses including independence, marginal and conditional independence, partial association.

**Unit-IV:**

Family of Generalized Linear Models: Exponential family of distributions, Formal structure for the class of GLMs, Likelihood equations, Quasi likelihood, Link functions, Important distributions for GLMs, Power class link function.

**E15: OFFICIAL STATISTICS****(4 CREDITS)****Unit I**

Introduction to Indian and International Statistical systems. Role, function and activities of Central and State Statistical organizations. Organization of large-scale sample surveys. Role of National Sample Survey Organization. General and special data dissemination systems. Scope and Contents of population census of India.

**Unit II**

Population growth in developed and developing countries, Evaluation of performance of family welfare programmes, projections of labor force and man power. Statistics related to Industries, foreign trade, balance of payment, cost of living, inflation, educational and other social statistics.

**Unit III**

Economic development: Growth in per capita income and distributive justice indices of development, human development index.

National income estimation- Product approach, income approach and expenditure approach.

**Unit IV**

Measuring inequality in incomes: Gini Coefficient, Theil's measure;

Poverty measurements: Different issues, measures of incidence and intensity;

Combined Measures: Indices due to Kakwani, Sen etc.
